

Empowering smart learning

Charging Systems – Adjustable Mobile Desks – Tech Furniture & Mounts

ERGOTRON®

Charge forward. Charge confidently.

The quickest charge for your notebooks & tablets

Some charging products

PowerShuttle

PowerShuttle charges up to 40% faster than round-robin and other charging systems!

Ergotron PowerShuttle® technology is a patented, embedded control system that monitors incoming current from the wall outlet and distributes it to microprocessor-controlled outlets inside the charging cart to quickly, efficiently and safely charge your devices, and give you peace of mind. Here's how:

- Save time! PowerShuttle charges up to 40% faster than competitors' round-robin charging systems.
- Doesn't require manually switching between outlets or adjusting timers.
- Limits inrush current — the instantaneous current draw when you first power on.
- Prevents nuisance tripping of site circuit breakers and electromagnetic interference with other devices.
- Keeps you safe from arc at the plug and hazardous touch currents.

How PowerShuttle works

- 1 A sensor constantly measures the current coming into the cart from the wall outlet. This helps determine the geographic region where you are (various current limits are used throughout the world) and applies the current limit that is specific to your region.
- 2 PowerShuttle's inrush protection uses microprocessor controls to gradually increase current to the devices as the cart is initially switched on or plugged in, to prevent spikes.
- 3 As devices charge, PowerShuttle stays vigilant with a sensor continuously monitoring the amount of current from the wall outlet into the cart.
- 4 If the current from the wall outlet is about to exceed the cart's regional limit, PowerShuttle immediately divides the device outlets into groups. This "measure and divide" process (steps 3 and 4) will repeat until all outlets can be on at the same time.
- 5 As devices reach full charge, they'll draw less and less current until all device outlets can be "on" to minimize charge time.

ZIP40 Charging and Management Cart

Find the right charging cart or cabinet for your device:
charging.ergotron.com/finder

With Ergotron's acquisition of Anthro in January 2015, we're now working together to help you find the perfect cart, wall mount, or cabinet to fit your customers' devices, space and workflow.

Need more help? Call our Customer Care teams: Anthro-DNA (800-325-3841) or Ergotron (800-888-8458)

Broadest & best selection

ERGOTRON & ANTHRO-DNA™ STRENGTHS

Sleek, compact designs with a small footprint

Universal design fits all devices: tablets, Chromebooks, laptops and more

Separate locking IT area

Durable, solid construction with locking doors

UL or ETL certified and tested for safety to UL 60950 standard

Managed and unmanaged versions

Manufactured in the USA

Fastest charging times with PowerShuttle

YES36 Charging Cart for Mini-Laptops

YES20 Charging Wall Cabinet for Tablets

Why you should care about safety certification: the risks of using non-certified products

- 1 Critical materials are not fire resistant – This is a fire hazard if a battery or electrical fault occurs.
- 2 Electrical hazards are not physically enclosed – Shock hazards exist if energized circuitry can potentially be touched either directly or if exposed metal is not safely grounded or properly isolated. Fire hazards can exist if the enclosure can potentially let out flames or molten metal if an electrical fault occurs inside of the enclosure.
- 3 Mechanical hazards are not mitigated – If not properly tested and certified, pinch points, tip, crush or cut, sharp edges, and moving parts can injure students and staff.
- 4 Equipment ratings must meet National Electrical Code – Non-evaluated systems may exceed allowable load limits causing electrical arcing, facility problems and/or interaction and interference with other equipment.
- 5 No manufacturing factory quality surveillance – Product quality and consistency must be managed and ensured.

MAKE SURE YOUR CHARGING SYSTEMS ARE FULLY SAFETY CERTIFIED

Study finds significant health benefits associated with standing

Increase Heart Rate

Significant increase in heart rate from seated to standing work = 10 bpm (p = .012)

Burn More Calories (kcal*)

Significant increase in calorie expenditure from seated to standing work = 0.7 kcals/minute (p = .014)

*A kcal is the amount of energy needed to raise the temperature of one kilogram of water by one degree Celsius

Maintain Insulin Effectiveness**

**The concentration of sugar in the blood

SEATED	STANDING
Peak (highest) 152 minutes after lunch started	Peak (highest) 84 minutes after lunch started
Trough (lowest) 258 minutes after lunch started	Trough (lowest) 144 minutes after lunch started

The study, conducted by Dr. John Buckley at the University of Chester, was built upon previous findings indicating that prolonged sitting causes damage to joints which can lead to inflammation, stress and chronic pain and cardio-metabolic disease.

The BBC/University of Chester researchers found that both heart rate and energy expenditure were raised significantly by standing work, and that sit-stand computer workstations are both feasible and effective at reducing sitting time in a work setting.

The BBC/University of Chester research, "The cardiovascular and metabolic benefits of standing desk work," was aired October 2013 in the "Trust Me I'm a Doctor" two-part series on BBC Two television in the UK.

Kids are meant to move!

Healthy metabolism. Healthy performance.

Higher heart rate, increased calorie burn and greater insulin effectiveness translates to more engaged students. "Standing actually improved attention, on-task behavior, alertness and classroom engagement."¹ This sustained healthy metabolism leads to greater everyday classroom focus, which has a positive effect on cognition and test scores.²

¹ The Impact of Stand-Biased Desks in Classrooms on Calorie Expenditure in Children, Benden, Blake, Wendel, Huber, published in American Journal of Public Health, August 2011

² Institute of Medicine, 2013 (further reading), Centers for Disease Control & Prevention, 2010

I've noticed that my higher level kids are performing even higher than normal. And my lower level kids are also performing higher as well. Being able to focus in the classroom translates to better comprehension of the material.

Ms. King, Biology Teacher
Lamar High School, Houston, TX

LOCKING CASTERS!

Non-disruptive in-class physical activity

FLEXIBLE PERSONALIZED LEARNING

Create active learning spaces that are responsive to all users and that can accommodate the range of learning styles and pedagogy.

LearnFit student desks are designed to be intuitively height-adjustable.

Flexible personalization as classrooms and pedagogy evolve.
